HR Department
Amazon

Dear Sir or Madam,

I am writing in response to the available Software Development Engineer Intern position at your company. I am a passionate, young software developer looking for new challenges. Currently I am a Master of Computer Science student, who has completed a Bachelor of Computer Science degree.

At the University I have gained a basic knowledge about computer sience and programming. For about a year I have been also working as a Game Developer at company called Aidem-media. Gaining my professional experience, I have learned way of creating robust, bug-free and performance sensitive applications in game industry. As a big fan of OOP development I have mostly used Java, C# and C++ in my projects, and also tried to bring best practices and patterns.

I treat programming and software development not only as a way of making money but mostly as my hobby, spending a great deal of my free time in order to expand my engineering skills. For about a half of a year, I have been highly interested in graphics programming. Since then, I have been spending most of my spare time learning about OOP and graphics programming, trying to create my own rendering engine, using OpenGL API and C++.

Amazon is known for its great reputation in IT business and employing best software developers, so I find it a great place to work in. With my dedication to improve my software develoment knowledge and my skillset, I know that I would be a great asset for the Amazon team. I am confident that I could make a valid contribution to your company.

Sincerely,
Rafał Sadowski
